

Mosaic | USA E-Handbook

Optimise the value of your customers and locations, now and in the future

Welcome to your Mosaic USA E-Handbook.

Successful organizations take the process of analyzing and understanding customers seriously. They use it to maximize their engagement with customers to increase loyalty, retention and value; drive profitable acquisition; and plan for the future.

This latest version of Mosaic USA capitalizes on Experian's access to a wealth of new and detailed information on households in the United States to provide a comprehensive view of consumers.

Prioritize and bring order to the data chaos by determining the right customer strategy

Provide a deeper understanding of your customers to target, acquire, manage and develop profitable customer relations.

Precisely target your ideal customer audience across marketing campaigns

Improve your understanding of targeting specific consumers to increase site performance, maximize sales conversion, optimize consumer targeting to ensure that the right product offerings are matched to the right audience and improve your media planning and buying across traditional and digital channels.

Invest in the future

Anticipate risk and plan for the future: analyze consumer behaviour, understand potential risk and identify investment opportunities.

The Mosaic USA E-Handbook provides a simple, clear and comprehensive guide that gives you all the information you need at your fingertips to help you in your day-to-day use of Mosaic. It helps you build a detailed understanding of your customers and locations, and become conversant with the dimensions of the new American consumer and their household dynamics.

More than 300 data points have been used to build Mosaic USA. These have been selected as inputs to the classification on the basis of their coverage, quality, consistency and sustainability.

To be included for use, the data variables must enable accurate identification of, and discrimination between, a wide range of consumer characteristics.

They must also be updateable over time to ensure continuing accuracy in assignments of the Mosaic codes and meet the following criteria:

- Allows the identification and description of consumer segments that are not necessarily distinguished solely by the use of census data.
- Ensures accuracy of Mosaic code by either household or neighborhood.
- Is updated regularly to ensure that changes are monitored.
- Improves discrimination and allows for the identification of a wide range of consumer behaviors.

Demographics	Socio-economics	Location	Financial measures	Property characteristics
Age	Education/qualifications	Urbanity/rurality	Income	Tenure
Marital status	Occupation	Means of transport	Credit behaviour	Property value
Household composition	Industry	Travel to work time	Owner of multiple homes	Number of rooms
Length of residency	Hours worked		Social security/assistance	Year built
Presence of children	Home business			Number of dwellings
Number of occupants	Vehicle ownership			Rent amount
Ethnicity				Group quarters
Language ability				

The Mosaic USA family tree illustrates the major demographic and lifestyle polarities between the groups and types, and shows how the Mosaic types relate to each other.

Charts provide details of the key variables used to build and describe the Mosaic groups and types.

For each group and type, the charts show the **Means** and **Index** for each variable.

Understanding Means and Index

Means show the percentage of this group or type with a particular characteristic.

For example, consider the Age composition of Group D:

This shows that:

- 2.89% of Group D are aged 19–24
- 2.29% of Group D are aged 25–30
- 5.27% of Group D are aged 31–35
- 37.58% of Group D are aged 36–45
- 20.47% of Group D are aged 46–50
- 19.78% of Group D are aged 51–65
- 8.11% of Group D are aged 66–75
- 3.62% of Group D are aged 76+

The **Index** provides further insight by comparing the characteristics of a Mosaic group/type with all households in the USA.

An **Index of 100** is the average.

An **Index greater than 100** shows that this variable is over-represented when compared with the average.

An **Index less than 100** shows that this variable is under-represented when compared with the average.

The chart shows the Index value from 0 to 200. If the Index value is greater than 200, the bar is shown as 200 along with the exact Index.
